# Setup once

Setup the connections and integrations once, and allow other services to use the same info. Examples include local/online telepresence, control via bluetooth remote or webpage

Use it without app

Maybe you don't need the benefits of having it external or are unable to use two separate apps. Use it by importing the SDK as a library and hooking it up by starting the service as a separate process and communicate with it the same way. You will also have the ability to pick and choose what services are included

Text to Speech

Audio

Camera Stream

External Devices

ControlSDK

Microphone Stream

Sensors

External App Example

External App Support

Build your own connection to the service without worrying about constantly updating it when a new version comes out. Ability to setup video streaming or motor control through ControlSDK exists while allowing automatic updates for new features. When streaming, the app will ask for permission to stream to URL, with option to show URL

Chat Socket

Control Socket
